

Sprint Retrospective

What went well – Our Sprint 1 was mainly focused on the UI/UX, and barebones of the code. It went well as we have the basic UI/UX and barebones code for the website, allowing us to have a clearer view on how we want to approach the website.

What could be improved – On our website there's a lot of things that could be improved like the UI/UX that we want to achieve, It still lacks some aspects of design, user experience and user interface. Collaboration could also use work and improvisation to make our lives as a group much easier and more seamless.

What needs to be done – On our Sprint 1 there is still a lot missing, the buttons still don't work, Functions are still non-existent, And there's still no interconnection for the whole website. We will try to apply these in the next sprint, Functionality. UI/UX still needs revamping as well, and we'll try our best to do these things.
