

Sprint Retrospective

What went well – Our Sprint 2 which was mainly focused on switching to PHP was a hard task. We have successfully made logins and signup, and we have the other pages their functionality, done as well.

What could be improved – Still everything is unfinished, Navigation could be better, and The website still looks unfinished, although its because we also had a hard time that we had to focus on the PHP transition first.

What needs to be done – Navigation, User Interface and Usability, and the programming, I think its lacking in all of these aspects. The website itself still isn't usable for the public and we need to finish it whole for the next Sprint.
